A week defined by two events the market had circled on the calendar for days: Nvidia's earnings and Warsh's speech at the Jackson Hole symposium. Nvidia beat expectations again — revenue that doubled to \$96.22 billion — and added \$442 billion in market cap in a single session, its biggest one-day gain in a year, confirming that the AI capex cycle remains the almost exclusive engine of global growth. Warsh, for his part, delivered his clearest signal yet on the path of monetary policy at Jackson Hole: he said he was "impressed" with the economy's strength but concerned that underlying inflation trends haven't improved, suggesting the Fed may need to raise rates in the coming months. After months of avoiding concrete signals, the market went from pricing a 34% chance of a September hike to a majority of investors now expecting one. In Argentina, the week brought partial relief: country risk broke its steep August climb and retreated toward the 500-basis-point zone, while the Merval recovered ground and Central Bank reserves touched a high last seen in 2019 — though driven more by the rise in gold than by genuine FX-market purchases.

1. Timeline of the Week

WEEKLY TIMELINE

Mon 8/24

Argentina stocks jump as much as 8% on Wall Street after a technical rebound in ADRs, boosted by a more favorable external environment for emerging-market debt and led by banks. Despite the improvement in bonds, country risk edges higher and fails to break below 500 basis points, touching an intraday low of 499 before closing just above it. The market starts looking ahead to the week's three key catalysts: Nvidia's earnings, the PCE release, and Warsh's speech at Jackson Hole.

Tue 8/25

Argentina's country risk rises and moves away from 500 points again, closing at 512 bps (+3 bps), while Central Bank reserves approach \$51 billion. Global stocks rise on lower oil prices and lower U.S. debt yields.

Wed 8/26

July's PCE and second-quarter GDP are released in the U.S. The PCE surprises to the upside: up 3.7% year-over-year (vs. 3.6% expected) and core PCE at 3.3% (vs. 3.2% expected), both unchanged from June — inflation stalls above the Fed's target instead of continuing to ease. Wall Street trades without clear direction ahead of these data points and Nvidia's earnings. Congress debates the reform of the Central Bank's charter. Central Bank reserves touch a high last seen in 2019 (\$50.912 billion), though the main driver is the international rise in gold rather than an acceleration of genuine purchases in the official market. The U.S.-Canada trade war escalates with \$20 billion in retaliatory tariffs.

Thu 8/27

Nvidia reports results that double its revenue to \$96.22 billion, with a 70% sales growth projection that lifts the entire tech sector and offsets declines in the rest of the S&P 500. Argentina's country risk retreats to 509 bps (-8 bps), with Argentine globals closing higher in Buenos Aires. The Jackson Hole symposium formally begins.

Fri 8/28

Nvidia shatters its post-earnings track record: the stock posts its biggest one-day gain in a year and adds \$442 billion in market cap in a single session; the company is also negotiating to buy Hugging Face for \$13 billion. Warsh closes the Jackson Hole symposium with the year's most anticipated speech: he says he's "impressed" with the economy's strength, but warns that underlying inflation trends haven't improved and that the Fed "has more work to do." Despite maintaining his refusal to give explicit forward guidance on the September meeting, it's his clearest signal yet on the bias of monetary policy: the market's pre-speech odds of a September rate hike (34%) shift to a majority of investors now expecting one. Argentina's country risk holds in the 509-510 basis point zone, with the Treasury rolling over 96% of its peso maturities. Venezuela negotiates with the U.S. over a stake in 17 oil fields; Iran conditions the reopening of the Strait of Hormuz on an end to regional conflicts.

2. Weekly Asset Price Changes

Prior close: Friday 8/21. Reference close: Friday 8/28.

Asset	Close Fri 8/21	Close Fri 8/28	Weekly chg.
S&P 500	7,674.37	7,711.76	+0.49%
Nasdaq 100	29,308.86	29,433.43	+0.43%
Dow Jones	53,277.01	53,559.99	+0.53%
VIX	15.13	14.43	-4.63%
10-Yr UST	4.74%	4.72%	-2 bps
WTI (spot)	\$87.06	\$83.44	-4.16%
Gold (spot)	\$4,624.10	\$4,504.10	-2.60%
Bitcoin	\$77,438.60	\$77,341.15	-0.13%
EMBI Global (Argentina)	532 bps	509 bps*	-23 bps

Argentina local market	Close Fri 8/21	Close Fri 8/28	Weekly chg.
GD30D	\$0.5701	\$0.5780	+1.39%
GD35D	\$0.7989	\$0.7986	-0.04%
S&P Merval (ARS)	2,913,183.50	2,987,913.25	+2.57%
S&P Merval (USD MEP)	1,897.74	1,943.37	+2.40%
USD MEP (AL30)	\$1,535.08	\$1,537.49	+0.16%

* Argentina's EMBI reflects the last confirmed official close (Thursday 8/27); JP Morgan publishes with a lag, and market sources placed the index at similar levels (509-510 bps) at Friday 8/28's close. GD30D, GD35D, and MEP verified on Balanz Productores at Friday 8/28's close. U.S. prices correspond to Friday 8/28's close, already reflecting the full market reaction to Warsh's speech at Jackson Hole.

3. Key Drivers of the Week

KEY DRIVERS

Nvidia shows once again that it alone sustains much of global growth

Revenue doubled to \$96.22 billion and the company added \$442 billion in market cap in a single session — its biggest one-day gain in a year — with a 70% sales growth projection that lifted the entire tech sector. The results land alongside a negotiation to buy Hugging Face for \$13 billion, consolidating its dominance of the AI ecosystem. The underlying read is more unsettling than the headline number: AI capital spending has become the almost exclusive engine offsetting the trade, geopolitical, and bond-market tensions that should otherwise be slowing the global economy. If that cycle decelerates even moderately, there's no visible second engine in sight to replace it.

The PCE confirms U.S. inflation has stopped easing

July's Personal Consumption Expenditures index rose 3.7% year-over-year and core PCE 3.3%, both above consensus (3.6% and 3.2% respectively) and unchanged from June. After the energy-driven inflationary shock tied to the Middle East conflict earlier this year, disinflation stalled well above the Fed's 2% target instead of continuing to retreat. It was the data point that set the stage for the more cautious tone Warsh would adopt two days later at Jackson Hole.

Warsh delivers his clearest signal yet at Jackson Hole: the Fed "has more work to do"

In his first appearance at the symposium as Fed chair — and on day 100 of his tenure — Warsh said he was "impressed" with the economy's overall strength but warned that underlying inflation trends haven't improved. Without committing to a concrete move at the September meeting and maintaining his refusal to give traditional forward guidance — the same communication style that had caused confusion and damaged market confidence in the Fed's strategy back in July — this time he left a much sharper signal of bias than in previous appearances. The immediate effect was significant: the market's pre-speech odds of a September rate hike (34%) shifted to become the scenario a majority of investors now consider most likely. The market's reaction in the hours that followed confirmed that shift: gold deepened its weekly decline to -2.6%, and Bitcoin, which had been positive for the week, closed in negative territory (-0.13%) after the speech — the logical counterpart of a dollar and short-end rates the market began pricing firmer. The speech came just two days after a PCE that had already surprised to the upside, reinforcing the read that the Fed is prioritizing its anti-inflation credibility over the easing expectations that had built up since Warsh's nomination.

Argentina's country risk breaks its climb and retreats toward 500 points

After accumulating a rise of more than 20% in the first three weeks of August across thirteen consecutive sessions of bond declines, Argentina's EMBI retreated this week to 509 bps, with the Treasury rolling over 96% of its peso maturities. The relief coincides with a more favorable external environment for emerging-market debt, though Central Bank reserves — which touched a high last seen in 2019 at \$50.912 billion — rose mainly due to the valuation effect of gold's rally, not from a genuine acceleration of purchases in the official market. With the wholesale rate above \$1,500 and the Treasury competing for financial dollars ahead of the elections, that distinction between genuine reserves and valuation effect will be key to sustaining this week's relief.

4. Signals to Watch — Week of August 31–September 4

SIGNALS TO WATCH

Full repricing of rates and the curve following Warsh's tone

The speech landed just hours before this edition went to press; next week will show whether the jump in September hike odds (from 34% to a majority) holds in the rates futures market or moderates once the full message is digested, including the reaction on the long end that the Treasury has been trying to contain through buybacks.

Sustainability of the Central Bank's reserve high

With most of the weekly increase explained by gold's valuation effect rather than genuine purchases, a correction in the metal would expose the real fragility of the reserve cushion ahead of upcoming maturities and the electoral cycle.

Legislative progress on the Central Bank reform

With the debate already underway in the lower house, the central question becomes whether the ruling coalition can turn the committee stage into approval before the 2027 legislative turnover approaches.

Continuation of Nvidia's rally and its spillover into the Nasdaq

With the market rewarding real monetization over capex promises, the rally's durability will depend on whether the rest of the AI-linked tech names confirm a similar dynamic in their upcoming earnings.
